

# FINE METAL ROOF TECH

## METAL for Standing Seam Roofing Systems

### • Steel

A great budget conscious choice. Comes with a 35 year Non Pro-rated Warranty on the Kynar® paint and a 20 year warranty on the Galvalume substrate. Application in proximity to a coastline with surf, the distance from the coast must be at a minimum of 2,800 feet. Application in proximity to a large bay, the distance must be at a minimum of 1,200 feet.

### • Aluminum

Save money and get a quality product with easy to install aluminum. Our aluminum systems come with 35 Year Non Pro-rated Kynar® Paint and 25 year Aluminum Substrate Warranty. Application in proximity to a coastline with surf, the distance from the coast must be at a minimum of 2,800 feet. Application in proximity to a large bay, the distance must be at a minimum of 1,200 feet.

### • Copper

Our standing seam copper panels come in a choice of 16 oz or 20 oz and whatever finish your heart desires. Bare copper, pre-oxidized, pre-patinated, chemically color treated, we can do it all! Please call for details.

### • Copper Clad Stainless Steel

The strength of stainless steel with the look, beauty and patina characteristics of copper at a smaller price. Though more rigid than copper, the weathering properties of copper still apply. The material is warranted for 25 years plus six months. That said, roofs made from this remarkable material have lasted decades maintenance free.

### • Stainless Steel

Stainless steel is an ultra-permanent material perfect for roofing and wall cladding and other architectural applications. It is non-reactive with most metals so it can be easily combined. It is the ideal metal for coastal building as it is highly resistant to salt spray, and is the ultimate choice for buildings exposed to pollutants and buildings in extreme weather locations. When installed properly, it can last for centuries regardless of environment.

Though our InvariMatte® finish is by far our most popular, our stainless steels come in a massive variety of choices. Mirror finished, patterned, etched, even painted. Want a custom pattern? It's possible! Since there are so many choices, give us a call and we'll get you specific information on your request.

## • Zinc

In widespread use throughout Europe for centuries, zinc is a relatively new addition in the New World. Versatile and beautiful, it's a great choice for any style of building. For roofing applications, zinc can last well over 50 years. For wall cladding applications zinc can last over a century. Zinc requires no scheduled maintenance. Please inquire about color and finish options and warranty information.

## • Falzinc

Falzinc represents the perfect combination of two well-proven materials - Aluminum and Zinc. The fusion of the two layers in each product offers advanced performance yet lends itself to traditional metalworking skills - even in freezing temperatures. A pre-weathered zinc layer encases the aluminum core. The result is a building material which combines the sophisticated and elegant appearance of preweathered zinc with the benefits of aluminum. The weather erosion rate is low, which is typical for aluminum. Falzinc is suitable for a wide range of new build and refurbishment applications.

## • Titanium

An ultra-luxury metal, titanium is a stand-out on any project, and the premium choice for severely corrosive environments. Titanium generally has a duller surface than stainless steel and is a bit more variable in appearance. The special processing of our titanium choices help keep a more consistent look. Our titanium bears a 30 year limited warranty. Please ask about choices and material details.

## • Other Metals

We've worked with all manner of zinc, copper and brass alloys and other exotic metals in our many years in the business. One of the great things about working with us, is that you can rely on our vast network of providers throughout the world. If you just need an out-of-the-box idea or if your client has something specific in mind, by all means ask us! If it makes sense from an engineering perspective, we'll make it happen for you!

## • Rollforming Services

Already have your metal? We'll rollform it for you and make all the accessory pieces you need. We can construct almost anything. If you have a difficult detail to solve for, there is no one better to make it work for you. Give us a call today! 801-462-5264
