

Corrugated terne systems for wall and higher pitched roofs

Though corrugated metals lend themselves well most particularly to farmhouse and rustic buildings on one end of the spectrum, and contemporary on the opposite, they also fulfill a **variety of styles** between in unique and unexpected ways. When paired with terne, corrugated systems are a glorious match in both form and function.

Terne (pure tin over a stainless steel substrate) lends itself to extreme weather environments holding up well against hail and heavy snow loads. As a **“living” metal**, the tin will weather and change over time with each project developing its own distinctive personality. **Patinated metals** have an earned distinction of being used on the most historically important buildings. Today, they are used on high-end, most sought-after properties both for their individualistic characteristics and their technical performance.

This mountain home in beautiful Park City, Utah shows both terne corrugated panels on the walls and terne double-locked standing seam on the roof. Paired with stainless snow abatement systems and European half round gutter systems, this gorgeous home will become lovelier with age and patina and stand up to the grueling winters this area can sometimes experience. It will certainly last maintenance-free for generations.

Corrugated Panels

7/8" round corrugated panels come in standard lengths of 8 feet, 10 feet, and 12 feet. Custom lengths can be ordered as needed up to 35 feet. The system comes with all necessary J-channels and accessories. One of the best reasons to work with us here at **Fine Metal Roof Tech**, is that we are a one stop shop for all world-class metal roof and cladding accessories. We offer **consultation** and assistance as needed and specialize in solutions for difficult and technically complex projects.

Terne corrugated systems can be used as roofing for higher pitched projects and applied directly to the wall or set up with hat channels as a highly effective rainscreen. **Rainscreens** optimize the health and efficiency of buildings in myriad ways. We will help you determine what will work best for your particular building and area.

CorruGreat Panels

In your search for the perfect cladding, our CorruGreat panels with squared-off edges provide a sharp alternative to the round 7/8" version.

Terne corrugated panels charge in as today's cladding zeitgeist. This unique panel, with its distinctive and refined appearance, can give any project the look of class with superior function.
